

A modern teal and white nursing chair on wheels is positioned in a bright hospital room. The chair has a teal upholstered seat and backrest, and a white base with drawers and casters. A black floor lamp stands next to it. In the background, there is a window with blinds, a wooden cabinet, and a hospital bed with teal bedding.

MADE TO CARE

SINCE 1991

Nursen is a manufacturer of high-quality seating furniture for health care, nursing care and institutional care.

Nursen products meet not only the most stringent requirements for safety and quality of the materials used in the production process, but also for the comfort of both clients and personnel.

Nursen is a part of JECH CZ s.r.o., which was established in 1991 and has always been a fully family-owned company.

QUALITY IS AT THE HEART OF EVERYTHING WE DO

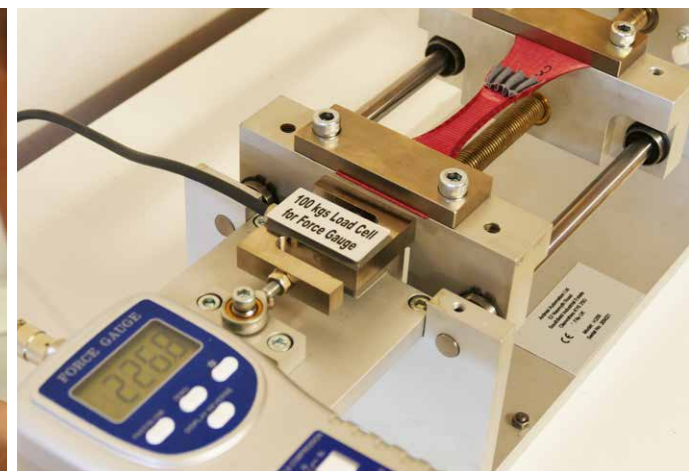

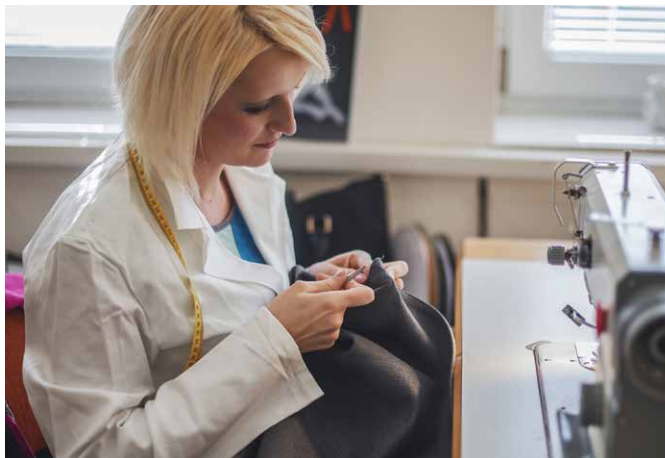

Quality

Quality is the cornerstone of our activities and business. We endeavour to maintain the quality of our products and services at the best achievable level during the entire production process of each single piece of furniture, all in compliance with **ISO 9001:2008**.

The result are products which are comfortable, safe and easy to control, and which offer a wide choice of accessories, including elements encouraging the clients' perception.

Technology of fusing artificial leather

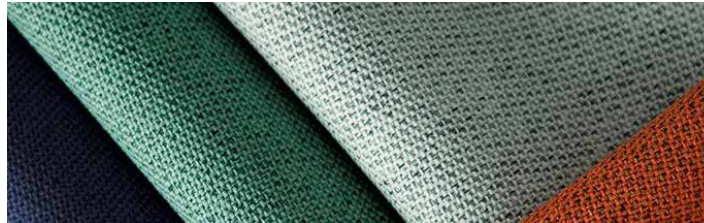

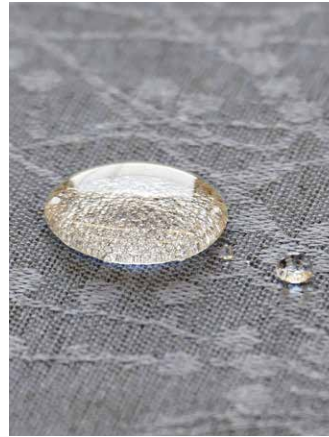

We join artificial leather by method of high-frequency welding. This prevents the material from being disturbed by needle marks and from water, detergents or other fluids penetrating the upholstery. This keeps the upholstery more hygienic and free of bacteria.

Management System

UPHOLSTERY & FINISHES

FUNCTIONALITY,
COMFORT, SAFETY

Upholstery fabrics of the highest quality.

We use fabrics made by leading global manufacturers which meet all important standards and at the same time look attractive. They are easy as far as maintenance and hygiene is concerned.

The fabrics do not lose their properties through washing, frequent use or aging of the material.

They meet the important international fire protection standards DIN 4102, BS 5852 crib 5 and others.

The fabrics are characterised by colour brightness and fastness in light. They are also exceptionally resilient to wear and tear, maintaining their attractiveness even when used intensively.

Further evidence of their suitability for hospital and nursing home environments is their resilience to standard disinfecting methods.

Nursen Fabrics

Chili (fabric) uniquely combines sustainability with superior fire safety. Made from 75% post-consumer recycled flame retardant polyester, the fabric sets new environmental standards for fire retardant fabrics.

Vita (Vinyl) provides maximum protection for heavy duty end-use areas in sectors such as contract, healthcare and hospitality.

Gabriel®

GAVOTA

GAVOTA armchairs are outstanding pieces of furniture that make life easier for people with limited movement. They have been specially developed for use in retirement homes, hospitals, care homes and day-care centres, and are excellent for use in lenitive care.

What is more, they blend in with the interior thanks to the quality manufacturing and the use of quality materials.

GAVOTA armchairs work on the basis of a modular system, meaning that the armchair can be configured to precisely suit your needs. The wide range of accessories available also makes GAVOTA a wonderful assistant that combines rest and relaxation with outstanding functionality.

The used PUR foam materials are non-combustible and meet the British BS 5852 (Crib 5) standard.

Surprisingly more than just an attractive chair

Patent-protected

Adjustable armrests

Armrests can be set at five different heights.

Ergonomic, adjustable leg rest, support for the lower part of the foot, adjustable and upholstered (can be position-adjusted independently).

The folding footrest with anti-slip surface

to support the feet of the person being moved, makes it easier to get into and out of the chair, and provides a natural stop against involuntary movement of the armchair.

The plastic wheel's protective part

prevents interiors and the armchair from being damaged.

The handlebar for guiding the armchair allows someone else to operate the chair and adjust the backrest.

Adjustability controllable while standing – armchair can be adjusted by staff.

Spacious back pocket for storing the personnel's and client's possessions.

Hygienic space between the seat and the backrest. The material beneath the seat's upholstery is leak-proof.

Solid wood frame with a wide range of wood-staining options.

Position controlled by the person sitting in the chair. Backrest and foot rest can be controlled from either side.

The wheels enable chair to be manipulated.

The wheels are rotating and fitted with a brake.

TENTE

The protective element prevents interiors and the armchair from being damaged.

The fifth, directional wheel system makes it easier to move straight ahead when there is someone in the chair.

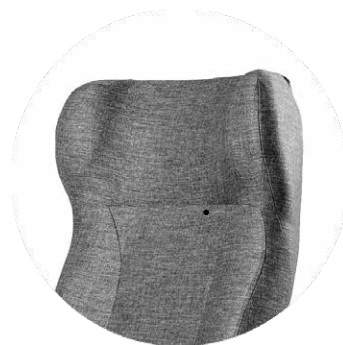

Configure your Gavota armchair

just how
you
want it

① CLASSIC BACKREST

Gavota armchairs provide outstanding body support in all positions, especially when combined with the special head-rest.

② COMFORT BACKREST

Offers relaxation with elements of basal stimulation, a feeling of safety and home comfort.

③ FIXED ARMREST

The fixed armrests come with a quality surface finish for easy maintenance. Optional upholstered armrests provide even greater comfort.

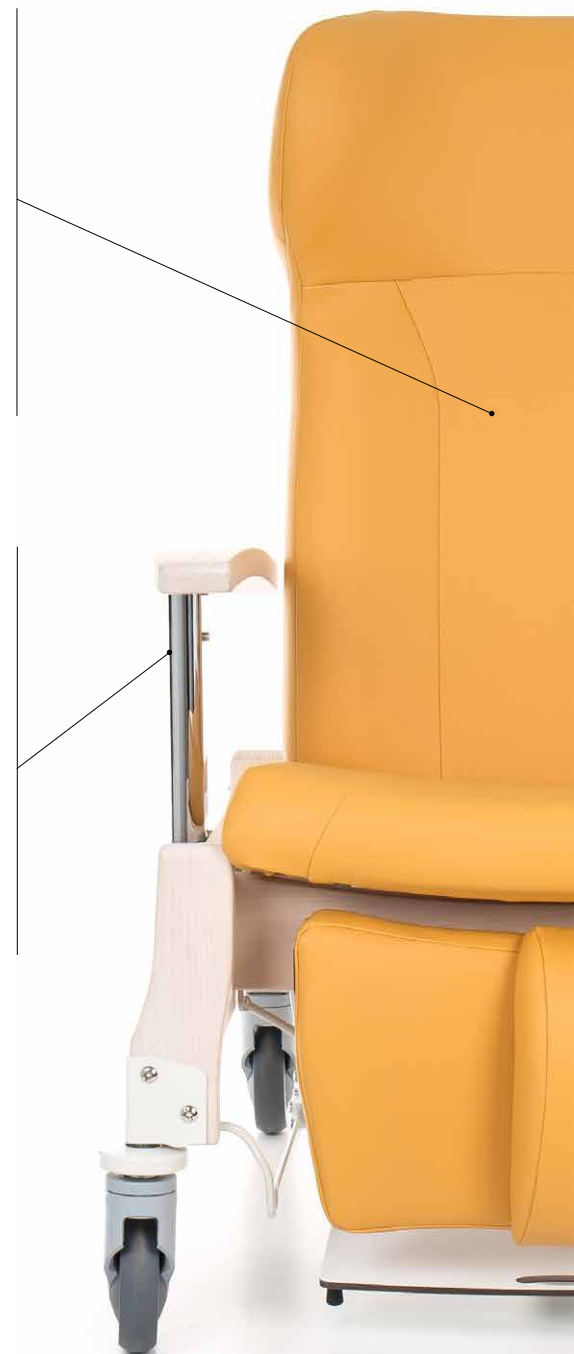

④ ADJUSTABLE HEIGHT ARMREST

Armrests can be set at five different heights. They make it easier to manoeuvre a person from the chair to a bed or other armchair.

Motorized version

maximum comfort for people with mobility problems

Version with an electric motor

- **The single-motor version without a battery** allows the footrest and backrest to be simultaneously adjusted while the chair is connected to the electrical mains.
- **The single-motor version with a battery** allows the footrest and backrest to be simultaneously adjusted without the chair needing to be connected to the electrical mains.
- **The twin-motor version without a battery** allows the footrest and backrest to be independently adjusted while the chair is connected to the electrical mains.
- **The twin-motor version with a battery** allows the footrest and backrest to be independently adjusted without the chair needing to be connected to the electrical mains.
- Compatible with all types of armchairs B, C, D, G, F
- Battery with 200 cycles

Gavota Plus

4 cm of added comfort for taller people

Thanks to the higher, 51 cm seating position, taller people will find it easier to stand up.

VERSION Plus*

VERSION Plus*

Decubitus-preventing version

Visco memory foam is used in the **anti-decubitus design of the GAVOTA armchair**. This foam was invented by America's NASA. Lazy foam products, with their first-rate formability and minimal pressure points, are exceptionally suitable for people suffering from illnesses of the spine and the products have anti-decubitus effects to protect against pressure ulcers. This design comes at an additional cost.

For more details, see page 39.

*The Plus version is available for the Gavota A, B, C, D, and G with the firm and height-adjustable armrests.

SALZA

The Salza Armchair is a brilliant piece of furniture that combines the qualities of a comfortable chair and a comfy bed, while at the same time providing versatility and convenience.

Additionally, it saves space and can be easily adapted to your current situation.

The collapsible Salza chair is ideal for hospitals, retirement or nursing homes, hospices, or clinics, enabling people to accompany their loved ones and be with the elderly or the sick even throughout the night at their bedside.

You may also see the Salza Armchair in the form of an extra bed in a hotel or boarding house, and it is also very useful in guestrooms and children's rooms.

**Chair as
an extra bed**
allows one to spend
the night with the
patient next to
his/her bed

Surprisingly more than just 2 in 1

Patent-protected

The chair can be supplied with upholstery made of special, easy-to-wash artificial leather. A broad range of modern upholstery materials is also available.

The chair's appearance is underlined by the **solid wood** armrests and the front of the sliding mechanism.

The wheels enable an assembled chair to be manipulated.

The front wheels are rotating and fitted with a brake, the rear wheels are fixed.

The folding mechanism is designed to enable adjustment of the variable-length sleeping surface.

The chair's stable frame is fully washable.

SALZA WOOD

Key features

- The chair provides three relaxing positions – a seated position, a relaxing reclined position with extended foot-rest, and a sleeping position.
- Flame-retardant polyurethane foam, which conforms to standard NSW 302, is used for comfortable relaxation and peace of mind.
- The outer, wooden parts have been treated with a quality varnish and can be easily washed and cleaned, just like the mechanism's metal parts.
- There are two design options for the armrests, with or without a cross-section.

Technical parameters

Material used in frame

Beech wood components are used in the construction of the visible, load-bearing parts of the chair.

TECHNOLOGY OF FUSING ARTIFICIAL LEATHER

We join artificial leather by method of high-frequency welding. This prevents the material from being disturbed by needle marks and from water, detergents or other fluids penetrating the upholstery. This keeps the upholstery more hygienic and free of bacteria.

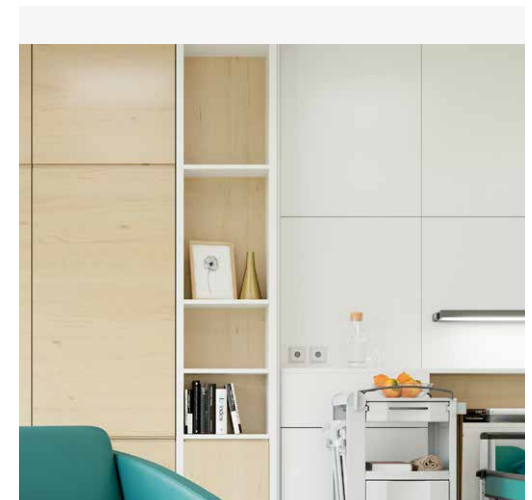

EASY MANIPULATION OF ASSEMBLED CHAIR

The chair has a patented mechanism which ensures that when assembled, the chair construction does not touch the ground, allowing it to be easily manipulated on its two front rotating wheels and two smaller rear wheels.

ASSEMBLING THE CHAIR

The strong, robust, and highly stable folding mechanism ensures a comfortable and safe sleep. It consists of a galvanized metal structure that is protected by a high quality powder coating. The chair can be spread by simply pulling it, thus not relying on the strength of the seated person. The chair provides three relaxing positions – a seated position, a relaxing reclined position with extended footrest, and a sleeping position.

POSITION HEADREST

The headrest can be adjusted depending on the user's height and current needs.

EVENES

The EVENES lifting chair is a functional, very comfortable and yet elegant assistant, ideal for households as well as nursing homes.

All it takes is the press of a button and the EVENES chair will smoothly and safely tilt and lift a weight of up to 160 kg. It thus allows the person sitting in the chair to get up comfortably without help, and makes the demanding work of the carer easier. Another beneficial feature is the positioning of the footrest and backrest.

In addition, the seat is depth-adjustable and thus can be set to a position which suits people of different heights.

The chair's robust beech wood construction combined with the self-extinguishing foam rubber and removable covers make the EVENES chair an excellent and highly resilient companion for households, common rooms, bedrooms and club rooms, as well as for corridors of nursing homes for occasional relaxation.

Surprisingly more than just a lifting chair

Depth-adjustable seat

Enables people of different heights to choose from two different seat depths.

Ergonomic footrest

Position-adjustable upholstered footrest

Chair's remote control

Can be ordered in a version with non-combustible PUR foam which meets the British BS 5852 (Crib 5) standard.

The ergonomically shaped backrest offers relaxation, a feeling of safety and home-like comfort.

ALTA

Chairs from the ALTA collection will fit any premises and meet the demanding requirements of elderly and less mobile persons. The stylish construction from solid oak, combined with modern yet practical upholstery, will please not only clients of nursing homes and care facilities, but also their personnel and guests.

The chairs are easy to store and can be moved without effort. All parts of the upholstery are easily removable and washable. You can choose from three variants – a single chair, a double chair and a triple chair, and also from two types: with a high or low backrest.

To make sitting even more comfortable, we have prepared for you a broad range of accessories with many elements (shelves, headrest, holders and pockets ...).

ALTA
SMART
TRAY

ALTA

Key features

- Robust construction from solid beech wood increases resilience.
- Removable seat and backrest upholstery.
- Underneath the seat upholstery is a leak-proof material.

- Clean and light design.
- The light weight frame of the chair makes it easy to handle.

Technical parameters

Material used in frame

Solid beech wood

Seat depth

470, 500, 530 mm

Maximum weight of user

150 kg

Dimensions (mm)

Parameters and options

ALTA CRUTCH HOLDER

A simply designed and yet very practical holder of crutches or walking sticks which can be easily attached to the armrest on the chair's right or left side.

WELL THOUGHT-OUT ERGONOMICS

Part of the well thought-out ergonomics is also a height-adjustable headrest. The chair is also ideal for long hours of sitting in the corridors of hospitals or day care centres.

ALTA LOW AND HIGH BACKREST

The chair has a simple system for attaching and removing the headrest. This allows the chair's height to be changed and combined in various ways. A high chair provides stable support of the whole back. A low chair is better suited to public premises.

ALTA SMART TRAY

Patent-protected system which combines a food tray with a shelf on the chair's side. The tray top is inserted into rails in the armrest. A silicon seal secures the tray from being accidentally dislodged, making sure it is firmly attached.

REMOVABLE UPHOLSTERY, REPLACEABLE SEAT AND BACKREST, EASY TO STORE

The chair can be easily disassembled into individual components in order to save space, e.g., when transported or in storage. All upholstery is removable. After protracted use, the seat and the backrest can be replaced with new parts, thus restoring the chair to its original beauty.

ALTA 2

Key features

filling and upholstery materials

- The materials used are carefully chosen with regard to the type of use and the load. All materials are non-detrimental to health.
- Quality PUR foam is used as a filling material. It is popular as a result of its permeability, point elasticity, long lifespan and sturdiness.
- SANAPUR imitation leather is used on seats and leg rests. It is a special, washable material with outstanding qualities and a hydrophobic, anti-fungal, anti-bacterial and vapour-releasing effect. It is washable at temperatures up to 95 °C, is non-flammable and can be disinfected. Sanapur has natural anti-fungal resistance on the reverse side and a sufficiently effective anti-bacterial finish.
- An isolating material is used on the backrest that is permeable and allows the upholstery to be removed with ease.
- Upholstery can be chosen – wipeable imitation leather or washable fabric, with a Teflon finish also possible.
- Emphasis is placed on endurance, resistance and easy upkeep as far as upholstery materials are concerned. Fabric covers are removable.

- An anti-bedsore system can be chosen for armchairs for patients at high risk of bedsores.

fire resistance / non-flammability

- The materials that are used comply with the high non-flammability standards laid down in **BS 5852 CRIB 5**. This is the strictest, universally recognised British standard for evaluating

the fire resistance of upholstered furniture. Products that are intended for use in public areas, places with a higher concentration of people, in hospitals, etc., must comply with this standard.

anti-bedsore system

- Bedsore is a term used to describe different types of poorly-healing, open wounds that can occur in people that are unable to move themselves and thus change the areas they put bodily pressure on. Long periods of pressure leads to compression of the blood vessels and damage to a certain region of the skin, which sees a deterioration in the supply of tissue with nutrients and oxygen. The skin and deeper tissue then begins to slowly die.
- Prevention is most important in terms of bedsores. This consists of eliminating the causes of bedsores, meaning regularly repositioning the person affected, providing him/her with sufficient nutrition, making sure that hygiene is good and using special anti-bedsore aids for people at risk.
- Special foam with a memory effect is used in the armchairs' anti-bedsore system. The foam used was invented by NASA and products made using it are

particularly suitable for people suffering from spinal conditions because of their outstanding plasticity and minimal point pressure. They also have anti-bedsore effects. Minimising the point pressure in particular places is further enhanced by special profiling. Profiled foam fully adapts to the shape of the body and spreads the strain out evenly.

This variant is subject to a surcharge: see price list.
